

SINO DCMC INTRODUCTION

Column and beam fixed type DCMC

X axis: worktable moving forward and backward
Y axis : saddle and spindle box moving left and right
Z axis : spindle box moving up and down

All DCMCs in SINO are fixed type and designed by PROE , FEA and thermal deformation principle to get best structure .

Cutting contrary strength

Machine strength direction

When machining, X axis direction force focused on body then convey to foundation
Z axis force from spindle to saddle to beam to column then to foundation

All DCMC are standard equipped with belt type spindle which can offer higher rigidity but competitive price

Tool cylinder

Main motor

Pneumatic tool clamping and unclamping

Spindle transmission - direct type

Spindle motor directly connects to spindle through high quality carbon fiber coupling.

Spindle motor thermal-protective plate with oil cooling

Mayr brand high torque high rigidity carbon fiber coupling (TKs=975Nm) , which helps to fullfil the nice performance of main motor as overturn torque is much reduced.

Hydraulic tool clamping and unclamping for spindle unit

Spindle transmission - gear type

Compared with belt type, gear head is with much higher rigidity, better for heavy cutting

Spindle transmission - square ram

ZF gearbox

spindle case diameter 210mm

With large cross section design, it improves spindle case rigidity by 20% compared with other competitors

Double balance cylinder can efficiently decrease bending moment during Z axis movement.(source powered by hydraulic station)

460mm (distance from spindle center to Y axis guideway)

Machine structure - saddle

To improve saddle rigidity and anti-shock, Z axis is made of box guideway with plastic which is manually scraped well.

One piece of screw nut seat improve machine accuracy

Thickness is 380mm improve rigidity

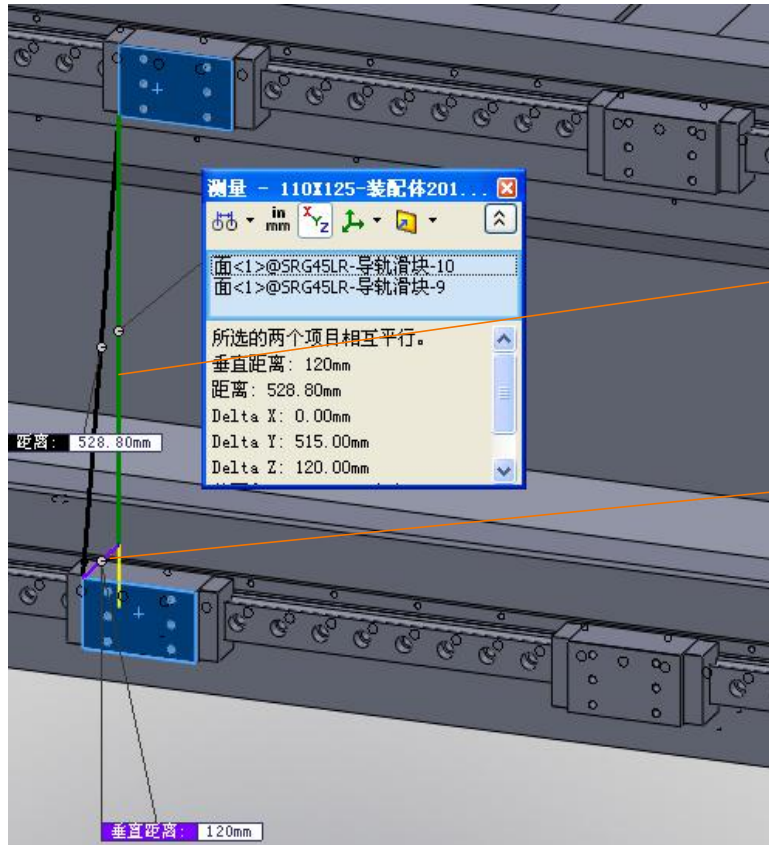

92 years machine manufacturer

SINO
CNC MACHINERY

Inner side use regular hexagon design for higher rigidity

Machine structure - beam

Upper guideway (SRG45)

→ guideways distance 528mm

→ ladder distance 120mm

Down guideway (SRG45)

Reasonable distance between guideway to spindle center by FEA

Ladder designed beam assured spindle case gravity backward.

Machine structure - base

SINO

OTHERS

- Foundation hole keep in vertical line with linear guideway which assure a better loading support.
- If machine is installed by two holes, one fixing hole and one adjusting hole, the machine base is easily deformed due to unequal force.
- Trapezoid foundation hole ensure machine stability.
- 500mm distance between two holes keep reasonable equal force.

- Worktable cavity is square and hollowed-out designed to reduce weight but keep rigidity. Groove is designed in case of cutting fluid flowing into the worktable underneath and inner side of machine to reduce slider accuracy.

3 axes motor connect ball screw directly by coupling and reducer

10 years free- maintenance Germany STOBBER reducer (increase torque by 1:4)

SERIES	MODEL	WORKTABLE SIZE	AXES TRAVEL	MOTOR POWER	SPINDLE TORQUE	COLUMNS DISTANCE	TRANSMISSION
10	SP1016	1000 x 1600	1650 x 1100 x 600	X/Y/Z: 3 SP:15/18.5	71.5	1250	BELT
	SP1020	1000 x 2000	2050 x 1100 x 600				
13	SP1325	2500 x 1300	2600 x 1400 x 800	X/Z: 3 Y:1.8 SP: 15/18.5 (WIDE AREA MOTOR)	143/143/572	1400	BELT TYPE STANDARD DIRECT/GEAR HEAD OPTIONAL

	SP2240	4000 x 2000	4200 x 2250 x 1000				

Standard accessories

Dual screw type chip conveyor	Air gun
Front side chain type chip conveyor	Cutting fluid cooling system
Semi enclosed splash guard	Tool box
Oil cooler	Auto power off
Tosoku MPG	Leveling blocks and bolts
RS232 and IEEE data transfer box	Oil skimmer
Automatic lubrication system	Transformer
Pneumatic coupling	3 colour LED warning light
Schneider electric parts	Heat exchanger
Independent lubrication oil collector for 3 axes	Z-axis retract function at power failure
Thermal compensation system of Spindle	Footswitch for tool clamping

Optional accessories

ZF/BF/GTP gear box

WEMAS gear head

Mitsubishi / SIEMENS/HEIDENHAIN

Extension head
(only manual)

Manual right angle milling head

Manual universal milling head

Semi-automatic right angle milling head

Automatic right angle milling head

Optional accessories

Chain type tool magazine-32T/40T/60T

RENISHAW tool measurement

HEIDENHAIN linear scale

CTS for belt type and gear head type

for direct type, cost is high and delivery time is long

4th /5th axis

Table size width increase
distance between columns/
column height increase

Connected with flange

Milling head rotating: manual
Milling head clamping tool: manual
Milling head installed: manual

speed	2000rpm
Max. power	30Kw
Max. torque	1000Nm
Tool specification	BT50
Clamping tool force	M24 screw clamping tool
Cutting coolant way	N/A

Semi-automatic right angle milling head

Connected with flange/ milling head moduel

Milling head rotating: manual
Milling head clamping tool: automatic
Milling head installed: manual/automatic

speed	2500rpm
Max. power	30Kw
Max. torque	500Nm
Tool specification	BT50
Clamping tool force	1200
Cutting coolant way	Cutting fluid

Automatic right angle milling head

Connected with milling head module

Milling head rotating: automatic
Milling head clamping tool: automatic
Milling head installed: automatic

speed	3500rpm
Max. power	30Kw
Max. torque	100Nm
Tool specification	BT 50
Clamping tool force	1500kgf
Cutting coolant way	Cutting fluid

Connected with flange

Milling head rotating: manual
Milling head clamping tool: manual
Milling head installed: manual

speed	2000rpm
Max. power	30Kw
Max. torque	1000Nm
Tool specification	BT 50
Clamping tool force	M24 screw clamping tool
Cutting coolant way	N/A
